

Plan of Activities

Integration of Verifiable Digital Credentials into the European blockchain infrastructure (EBSI) to support student mobility within the UnaEuropa alliance and simplify administrative processes related to mobility

The activities of the research grant will take place within the Una.Futura project and will include:

- Continuation of the exploration of the use of the European blockchain infrastructure (EBSI), proposed by Europe and of the standard of Verifiable Digital Credentials to represent, verify and use related digital certifications to the students of the Una Europa alliance.
- Continuation of work on the automatic recognition of qualifications
- Technological support to the development of a micro-credential framework at the alliance level
- Continuation of the collaboration and exchange on the European Student Card Initiative, including the Erasmus Without Paper Initiative (EWP), European Student Card (ESC) and App Erasmus+

Group activities aimed at the preparation of materials and prototypes are also foreseen. Experiences will also be gained in relation to drafting of informative documents and presentation of results and prototypes to the scientific community and local companies.
